

xUSDT Whitepaper

A next-generation digital currency for global payments.

xUSDT Whitepaper

Executive Summary

xUSDT is a BEP-20 token on the BNB Smart Chain designed to function as a dynamic, mintable digital currency and medium of exchange. Its mission is to become a widely used alternative currency for global payments, offering speed, low fees, transparency, and adoption-focused utility.

Problem Statement

Traditional finance is slow, expensive, and geographically restricted. Cross-border transfers are costly, and many cryptocurrencies are too volatile for daily use. There is a need for a reliable, fast, blockchain-based payment currency.

The xUSDT Solution

xUSDT provides:

- Fast, low-cost BSC transfers
- Mintable, flexible supply management
- Burn support for deflationary economics
- Pausable transfers for security
- Permit support for gasless approvals
- Verified and transparent smart contract

Token Specifications

- **Name:** xUSDT

- **Symbol:** xUSDT
- **Network:** BNB Smart Chain
- **Standard:** BEP-20
- **Decimals:** 18
- **Supply:** Dynamic / Mintable
- **Contract:** 0x79CaA0E30e929530E913d8D96994Ff2c98a20302

Tokenomics

xUSDT uses a dynamic, mint-controlled supply. The owner may mint new tokens to support liquidity, partnerships, or adoption initiatives. Burning is allowed for supply reduction strategies.

Use Cases

- Payments for goods/services
- Peer-to-peer transfers
- Merchant transactions
- Cross-border remittances
- E-commerce integrations
- Future DeFi integrations

Roadmap

Phase 1 – Launch

Deployment, branding, verification.

Phase 2 – Wallet Integrations

TrustWallet PR, token registries, auto-detect support.

Phase 3 – Merchant Adoption

Plugins, APIs, payment gateway modules.

Phase 4 – Exchange Listings

DEX liquidity pools, CEX listings.

Phase 5 – Ecosystem Expansion

Staking, on-chain utilities, governance upgrades.

Governance

xUSDT is initially owner-controlled with mint/pause capabilities. The long-term plan includes transitioning to a multisig or DAO governance model.
